**The Deciduous Woodlands:
How seasonal change affects temperate forest life**

By Ron Divelbiss, Metea County Park Naturalist

Most of Fox Island and Metea is woodlands. The changing seasons dominate deciduous woodlands. Woodland animals and plants live and breed in conditions that vary widely throughout the year. The key to their success is an ability to survive the winter and then take full advantage of the spring and summer. Deciduous woodland is the natural vegetation of much of temperate Europe and North America, and also occurs in the limited temperate lands of the Southern Hemisphere. But its water retentive soils make excellent farmland, and in many places woodlands have been replaced by agricultural development.

In the depths of winter there seems to be little life in a deciduous woodland. The trees are bare, snow may lie along the branches, and there is little bird song to be heard. Yet even so, there is activity. On the woodland floor shrews hunt for invertebrates such as woodlice and earthworms. Also active are resident birds like downy and hairy woodpeckers and blue jays. The blue jay survives the winter by eating the acorns it stored in the autumn. The hairy woodpecker changes diet, eating invertebrates in the warmer months and seeds in the winter.

Many species of birds - and a few bats - simply avoid the winter: they head for warmer climates after breeding. Mammals like the mouse and the skunk stay put but become less active, or hibernate.

As winter retreats, the days lengthen, the temperature rises and the snow melts; greenery and life return to the woods. First come the spring flowering plants, which expand their leaves and produce their flowers before the canopy closes over them and shades them from the Sun's light. Woodland trees - oak, hickory, maple, ash, beech

and many others burst into leaf, and no sooner are their leaves expanded than they are being eaten by insects and their larvae.

Migrating birds such as warblers return in spring to build their nests and raise their broods. The plentiful harvest of insects provides breeding birds with a protein-rich diet for their young. Down on the woodland floor deer browse the vegetation, and in the dense understory mice are busy searching out seeds, buds and invertebrates.

All parts of the forest - from the woodland floor to the top of the canopy - have their predators. Hunting spiders chase small invertebrates across the woodland floor, and far above, superbly adapted woodland hawks hunt small birds among the branches.

By late summer the migratory birds have raised their young and begin to leave. Trees are preparing for the dormancy of winter by withdrawing the nutrients from their leaves and shedding them. The leaves turn brown, red and gold as they die, and the jays hunt once more for acorns. The cycle begins again.

Upcoming Programs for Fall

Program fees are usually \$2.00 per person unless otherwise stated, and are used to provide operating funds (which are not supported by tax revenue) for Allen County Parks. Most programs require pre-registration to allow resource and staff allocation planning. There may be requirements for a minimum number registered to offer the program. You will be notified at least 5 days before program if the program has been cancelled due to minimum registrations not being met.

Programs with the  logo provide NISTEM reward points

Tai Chi

September 23 – November 18, Wednesdays
Instructor Sandy Gebhart will teach the Sun Short Form to novices and advance into the seventy three form with continuing students in this eight week Tai Chi class. The Sun Short Form is a gentle, non-strenuous form that can be practiced by all.

6:00 PM - 7:00 PM
Cost: \$50.00 for 8 weeks
Pre-register by: 9/18
Min: 10
Max: 25

Fox Island Nature Center

Session 1:
October 15
Beginner (grade 1-3)
Pumpkins – Seed to Jack-o-Lantern.
Study the life cycle of the pumpkin and then carve a Jack -O- Lantern to take home.

Session 2:
November 19
Squirrels
Red squirrels do not drive out gray squirrels; gray squirrels do not remember where they buried nuts, and squirrels *do* eat meat! Take a naturalist-led hike through Metea woods and learn more about these “nutty”, or not so nutty, rodents

Intermediate (grade 4-6)
Animal myths.
Are daddy-long-legs the most poisonous spider? Do squirrels get rabies? Learn the truth about our animal friends (and not some Internet rumor).

Geology
We'll get to the “rock bottom” of igneous, sedimentary and metamorphic, and learn about glaciers and other geologic forces and facts. Yes, it's true, Indiana ROCKS!

Advanced (grade 7-12)
Trees
We will continue the study of trees by building a collection for educational use in the park.

Mosses and Microscopes
Explore the tiny world of some of our smallest plants. What looks like just a little green spot in the woods becomes a whole ecosystem under the microscope.

Sunny Schick Photography Class – Shooting Nature

October 18, Sunday

Instructor Chuck Fletter will share techniques for shooting wildlife and taking macro photos. He will cover how to choose the best lens for your needs and how to make the best use of your existing equipment. A selection of Tamron demo lenses for Nikon and Cannon SLRs will be available.

2:30 PM– 4:30 PM

Fee: \$12.00
Pre-register by: 10/16
Min: 5
Max: 20

Caving Adventure

Trip November 21, Saturday

Mandatory Pre-class Friday, November 6

Go underground with Allen County Parks. Caving instructor and naturalist Bob Dispenza will be leading a trip to a new cave (for us) near Springville on Saturday, November 21. We'll be exploring a wild cave in the area and going off the beaten path, looking for cave wildlife and unusual formations. Mandatory pre-caving class is Friday, November 6, 7:30 PM at Metea County Park. Fee covers maps and caving instruction. Learn about geology, cave life, needed equipment and cave formation. This activity is somewhat strenuous, but suitable for beginners in good physical condition.

Our Mission: "To establish and manage a permanent park system incorporating conservation, education, outdoor values and nature preservation, and to provide recreational opportunities for the people of Allen County within this structure"

Allen County does not discriminate because of disability in the admission to, treatment or employment in, its programs or activities. The Human Resources director has been designated to coordinate compliance with nondiscrimination requirements contained in Section 35.107 of the Department of Justice regulations. Information concerning the provisions of the Americans with Disabilities Act, and the rights provided thereafter, and Allen County's ADA Policy are available from the ADA Coordinator. Requests for assistance or suggestions on how the County can better meet the needs of those persons with disabilities may be submitted to the ADA Coordinator at: Human Resources Department, Room 208, 1 East Main Street, Fort Wayne, Indiana 46802, or by telephone at 260-449-7217, TDD 260-449-7881.
